

Industrial Organization: **ACREFINE FIXING & SEISMIC**

Institution Representative: **Martin Deveci**

Short Description of the Organization:

***FIXING products for the construction industry supported by professional ENGINEERING to solve challenging problems in demanding applications involving SEISMIC RESTRAINT, VIBRATION ISOLATION or NOISE CONTROL.***

At Acrefine we offer a vast range of standard fixing products for the mechanical, electrical, plumbing and HVAC installations. We strive to work closely with our customers and provide solutions even for the most difficult applications. This is imbedded in our company culture and chiselled in our brand name with the word “SEISMIC”. This emphasises our commitment to solve difficult problems related to MEP installations. There are always challenges, in some cases vibration and noise from equipment must be eliminated or reduced. In extreme cases that are related to natural disasters such as earthquakes, storms and fire, human casualty and damage to property must be minimised. We combine our experience and knowledge with a wide range of standard and unique products to offer the best fixing solution to our customers.

Acrefine plays a leading role in the seismic protection of all types of buildings. In the modern construction industry buildings have to satisfy a long list of performance criteria drawn by architects and engineers. When it comes to performance requirements none are more critical than the one that can destroy the building such as earthquakes or fire. In these types of demanding applications, one has to go beyond simple product selection and installations. Acrefine manufactures top quality products that are tested and certified to the best standards by independent third-party organisations. Our team of professional engineers then select these products to meet the required seismic performance levels based on project specifications, local and international standards.

### **Tested, Certified and Code Compliant Products**

Acrefine manufactures a wide range of products used in seismic applications that include seismic bracings, seismically restrained isolators and snubbers. All of our products are tested to determine their performance levels and where required third party certification and approval is obtained.

### **Engineering is always at the heart of the problem**

Problems related to demanding and critical applications cannot be solved without proper engineering and experience. Our team of engineers offer full range of services related to MEP support design and pipe stress analysis. Seismic design and vibration analysis lays in the core of our business build on years of experience with hundreds of projects completed all around the world. Our designs and solutions are followed by onsite supervision to ensure our instructions are followed and best quality installations are achieved.
